June 25, 2013

Engine Pro has published its latest stock gasket catalog that features more than 200 applications of popular and hard to find gasket sets. The catalog, double the size of last year's catalog, is available from Engine Pro distributors or as a free download at www.enginepro.com.

All Engine Pro gasket sets are produced to meet or exceed O.E. standards and are 100% asbestos free. Cylinder head gaskets feature a gasket body constructed with exclusive technology featuring a perforated steel core with advanced adhesive to secure the facings that provides more radial strength and better resistance to scrubbing due to thermal expansion. They also have an exclusive sealing system using a special aluminum compound to provide better load spread. A Teflon-graphite coating technology offers better heat resistance and more effective sealing of small surface imperfections.

Engine Pro valve cover and oil pan gaskets are manufactured with a variety of technologies for improved sealing properties, torque retention and temperature resistance. Pre-lubricated oil seals are easy to assemble and provide enhanced resistance to abrasion, oil and heat.

Headquartered in Wheat Ridge, Colorado, Engine Pro is made up of ten independent engine parts distributors. The group operates 35 distribution centers serving machine shops, engine rebuilders and jobber customers throughout the United States and Australia.

EPGI also produces performance engine gaskets and other engine parts under the Engine Pro brand.
